

PRECISION DELIVERY SYSTEM

Featuring Taurus® Dry - Dry Flowable Termiticide

Taurus® Dry featuring the Precision Delivery System (PDS) is bringing to the professional market a new option for managing termites using a dry flowable formulation. In the past, pest management professionals had access to dust materials for management of termites and these products were useful in areas that were hard to reach or in situations with tough to manage termite species.

Several years ago, Control Solutions, Inc. set out on a path of intensive development to create an innovative solution for the pest management industry. The decision to invest the time was directly due to a need identified in the pest management industry, by pest management professionals. The Precision Delivery System is the solution to these challenges. The system delivers unparalleled efficacy, ease, application consistency, and value per placement of termiticide. Control Solutions, Inc. is happy to provide the professional industry a product that not only solves issues with older application techniques but also provides excellent control of termites. Taurus Dry was specifically designed to flow through the PDS so PMPs have an easy to use, precise, and consistent delivery system of a highly efficacious product. Additionally, with labeling allowing treatment of all species of termites in nearly any infested wood, Taurus® Dry and the PDS allows PMPs flexibility for managing termites in and around the structure.

Precision Delivery System featuring Taurus® Dry

PRECISION DELIVERY SYSTEM

Featuring Taurus® Dry - Dry Flowable Termiticide

The Precision Delivery System (PDS) is a piece of equipment for use as a termite control tool. Exclusively available to PMP, Taurus Dry + the Precision Delivery System were designed to make applications consistently, accurately, and precisely.

By utilizing the Precision Delivery System applicator, Taurus Dry is accurately placed deep into voids, cracks, and crevices with little to no guessing how much dry flowable material was applied. To determine how much Taurus Dry is applied, a PMP must simply count the number of seconds the trigger is actuated.

Taurus Dry is a highly effective product at low application rates. Placements as small as 0.1 g are effective at killing cockroaches where they live. Re-application of Taurus

Dry may be made if activity continues after 30 days.

The Precision Delivery System featuring Taurus Dry is a revolutionary combination that will make termite control more effective, more efficient and more professional. Supporting data and field experiences mean this is not your father's termite control product.
